

Vodafone Secure Device Manager

Powerful, simple-to-use device management for your smartphones and tablets.

Benefits

Supports **industry-leading** platforms

Ensures **compliance** and mitigates security risk

Easy to install, use and **maintain**

Simplifies enterprise application deployment

Simple-to-use **management** console

Can be **rolled out** to employees' own personal devices

Ever increasing numbers of employees are taking full advantage of smartphones and tablets to access company email and information. The challenge is to keep the data on these devices secure. To help, we've created Vodafone Secure Device Manager, a powerful yet simple and flexible solution that supports Apple® iOS, Android™, Windows®, Symbian® and BlackBerry® devices.

Secure Device Management

Vodafone Secure Device Manager is simple to deploy and enables you to configure and update device settings over-the-air. Enforce security policies and compliance and secure access to your organisation's resources. Send commands on-demand to devices to request info, perform remote diagnostics to identify device issues in real-time or remotely lock and wipe corporate data from your managed devices.

Application & Content Management

Vodafone Secure Device Manager lets you manage applications effectively across your organisation. Whether internal or public, you can distribute, monitor, update and secure your enterprise applications simply and efficiently.

Simple Management Console

We provide you with a device management console that you can access via any web browser, giving you complete visibility of all mobile devices deployed. The console allows you to streamline and automate the way you manage your mobile assets. It's also easy to update policies, settings, certificates or applications.

Solution in detail

Vodafone Secure Device Manager is powered by Airwatch™, a leader in enterprise mobile device management technology. Deployments are quick and easy, simple to maintain and are available either as a cloud-based or on-premise solution. Please note that features vary depending on your device Operating System. For details see the Vodafone Secure Device Manager Feature Matrix available from your Account Manager.

Cloud-based solution

Our cloud-based service is available in both a shared hosted and dedicated hosted environment and is easily accessible over the Internet. As a customer of this service you pay a monthly subscription for each device under management, which includes maintenance and system upgrades. Benefits of this model include:

- Multiple redundant data centres underpinned by best-of-class hardware
- High availability and guaranteed SLA uptime
- Scalability supporting 100,000+ devices
- Speed of deployment requiring minimal effort
- No significant investment in technology or installation services
- Maintenance and upgrades are handled by us

Additional protection options are also available:

Secure Email Gateway

- Access control to Exchange ActiveSync, Office 365 or Gmail for Business
- Monitoring of activity between device and email platform
- Available for all leading platforms

Secure Content Locker

- Store documents in a secure cloud-based content management console
- Authenticate users, encrypted transmitted documents or disable access
- Distribute files and updates to a single device or a group of devices
- Available for Apple and Android tablets
- Supports integration with dedicated Sharepoint

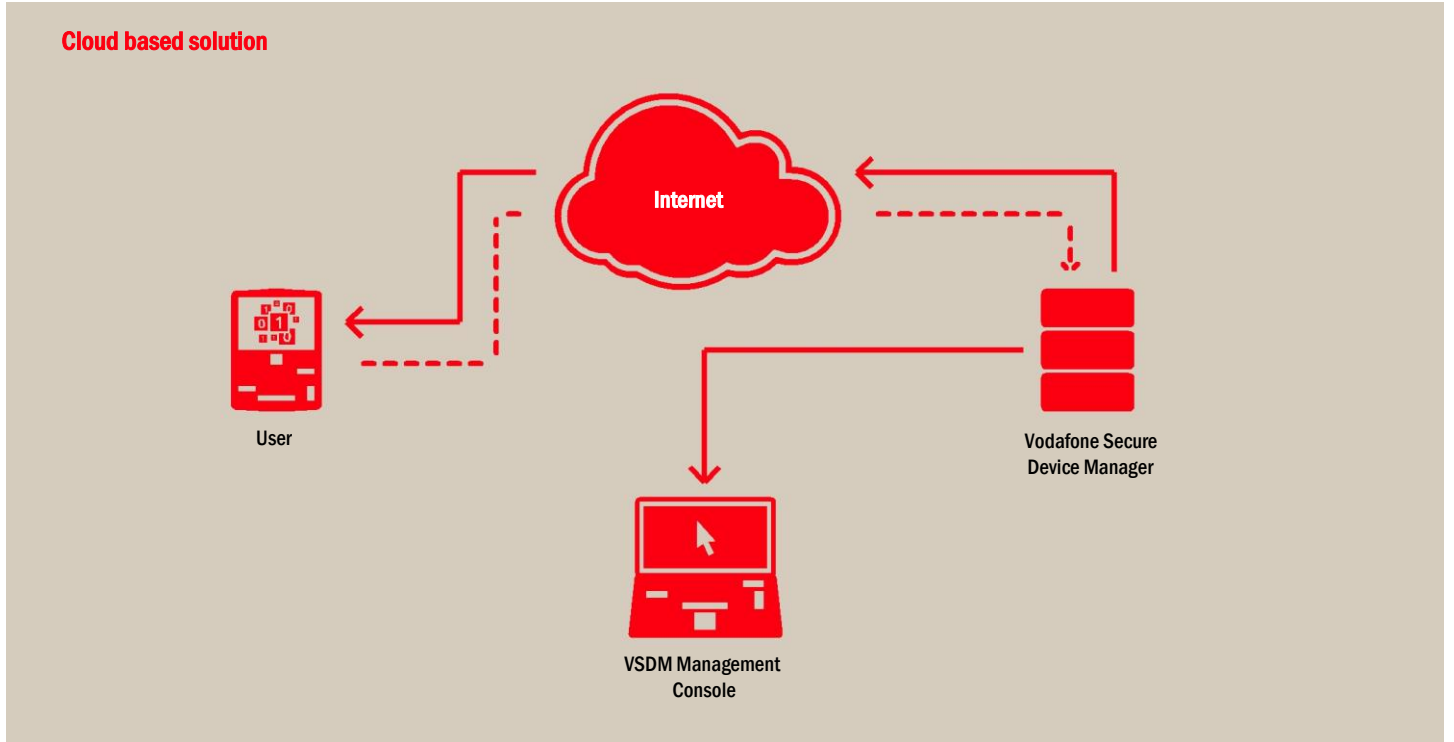

Vodafone Secure Device Protection

- Browser protection that automatically blocks harmful sites
- Anti-theft measures that remotely locate, protect and control your phone
- Protection against viruses and malicious software (worms, trojans and spyware) – Available for Android, Symbian, Windows Mobile 5.x and 6.x

Remote Control

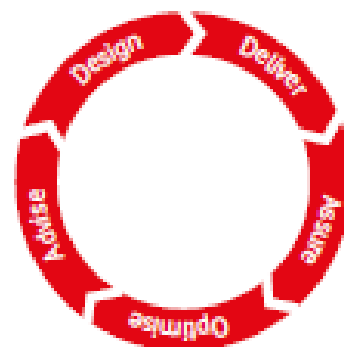

- Enables your IT Helpdesk to remotely access and control field based devices
- Improves diagnostics and configuration
- Reduces End User configuration discussions
- Available for Windows Mobile 5.x and 6.x

Solution in detail
